## OPERATING MODES

For your comfort, the Han-L6 is adjustable for all seasons  
 Select from;  
**FAN:** Provides air circulation to the rooms served by the system without running the main air conditioning unit (select either LOW, MEDIUM or HIGH operation)  
**DRY:** During those humid days, will automatically provide maximum dehumidification  
**COOLING:** Will operate the cooling to maintain the comfortable temperature on those hot days  
**HEATING:** On those cool or cold winter days, will control the heating for a warm comfortable atmosphere  
**AUTO:** Select a temperature and the control will automatically select the mode of operation to maintain the temperature selected.

## LCD DISPLAY

For easy reading, the Han-L6 is fitted with an LCD display panel. The moment any button is touched the "lumalite" backlight illuminates the control display screen, this automatically switches off after adjustments have been made.

## ACCURATE CONTROL

For more control and comfort the Han-L6 allows you to set the temperature in increments of 0.5°C and controls the temperature at set point  $\pm 1/2^\circ\text{C}$ . Adjustment of control is simple with clearly labelled soft touch tabs to change comfort levels or select mode of operation.

## ZONE CONTROL

For greater flexibility, the Han-L6 provides the option of switching areas ON/OFF. This allows for the switching of up to 6 zone dampers. Indicators on the LCD display advise which zones are turned on.

## DUAL CONTROL OPTION

For your convenience, one Han-L6 controller can be installed in the living area with the option of a second Han-L6 wall controller in the bedroom. This allows daytime settings programmed in the living area and nighttime settings programmed in the bedroom.

## SLEEP MODE

When the air conditioner is operating at night, press the sleep tab when going to bed and the Han-L6 will automatically set back the temperature during the sleeping hours to prevent you becoming too cold or too hot while in bed.

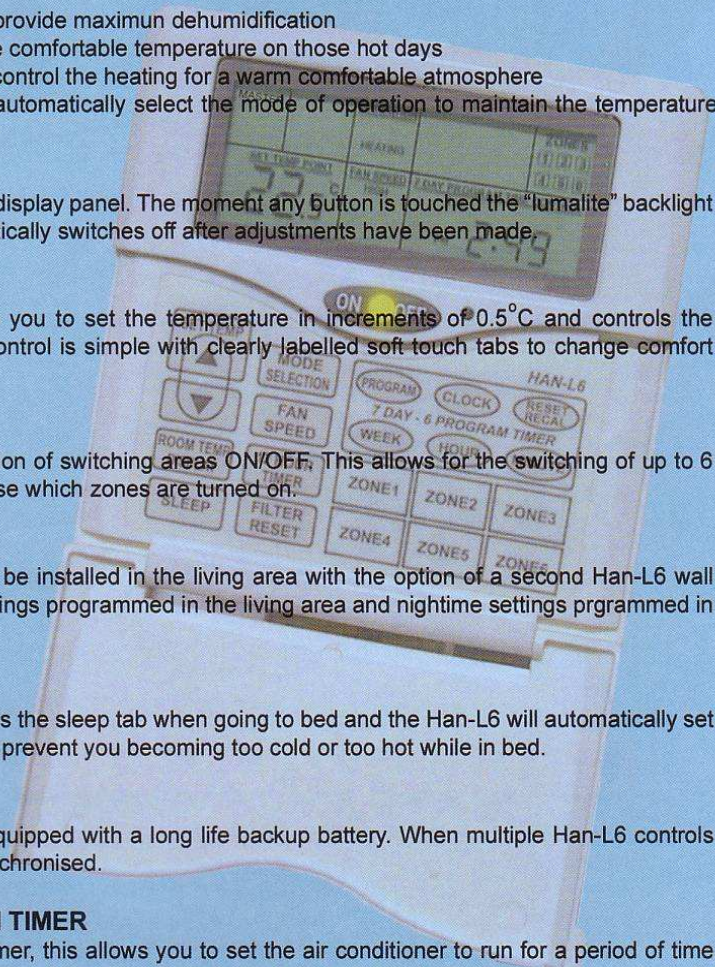

## REAL TIME CLOCK

A real time clock is incorporated in the Han-L6, equipped with a long life backup battery. When multiple Han-L6 controls are installed, the time display on all clocks are synchronised.

## DELAY STOP TIMER & 7 DAY 6 PROGRAM TIMER

The Han-L6 is incorporated with a 1 to 12 hour timer, this allows you to set the air conditioner to run for a period of time and automatically stop once that time has elapsed.

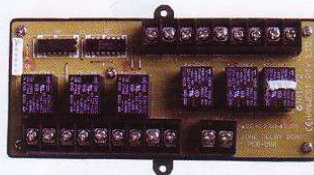

The Han-L6 has a programmable time clock that can set from 1 to 6 start & stop times. As an option, an additional Han-L6 can be installed and will provide an additional 1 to 6 start & stop times. When two Han-L6 controls are installed the time clock in each Han-L6 can be used to automatically change over control between the living and sleeping areas at preset times in the morning and evening.

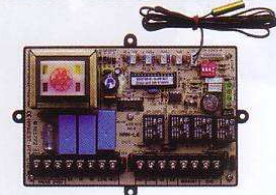

OPTIONAL RSP-100 REMOTE SENSOR

OPTIONAL ZONE RELAY PCB-086
